

1/4 50

FIG. 1

FIG. 1 is a perspective view of a robotic arm assembly 10. The assembly includes a base 12 with a motor 22 and a control unit 260. A vertical column 40 is mounted on the base. A horizontal arm 41 is attached to the column. The arm has a joint 38 and a gripper 170. A cable 172 is connected to the gripper. A reference numeral 10 points to the entire assembly.

FIG. 4

This exploded perspective view illustrates the assembly of a handheld device. The main body (12) features a base (26A) and a handle (26B). A circular component (38) is shown detached from the base. A cylindrical component (30) is positioned above the base, with a circular cap (32) and a lens (38) shown detached from its top. A rectangular component (40) is shown detached from the side of the main body. A small electronic component (46) is shown detached from the top of the main body. A lens (38) is shown detached from the side of the main body. A small electronic component (46) is shown detached from the top of the main body.

FIG. 9B

FIG. 1 is a cross-sectional view of a dual-chamber medical device, such as a catheter or probe. The device features a central shaft with two internal lumens. The outermost layer is labeled 90. The shaft is divided into two main sections by a central partition 82. The left section contains a lumen 78, and the right section contains a lumen 60. The shaft is surrounded by a protective sheath 64. The device is shown in a cross-section, revealing internal components such as the shaft 80, the partition 82, and the lumens 78 and 60. The device is shown in a cross-section, revealing internal components such as the shaft 80, the partition 82, and the lumens 78 and 60. The device is shown in a cross-section, revealing internal components such as the shaft 80, the partition 82, and the lumens 78 and 60.
